Computer Engineering student seeking 4-month Fall 2026 Product Design/Front-End co-op

Education

University of Waterloo

Waterloo, ON

Honours Computer Engineering, Co-op

September 2025 – May 2030 (expected graduation)

- **Relevant Coursework:** Fundamentals of Programming (ECE 150), Digital Circuits & Systems (ECE 124), Linear Algebra for Engineering (MATH 115)

Skill Set

Design & QA: Figma, Canva, UI/UX Layout & Typography, Design Systems, Manual UX Testing, Visual/Graphic Design, Bug & Defect Reporting

Programming & Web: Python, C/C++, HTML, CSS, JavaScript (ES6+), TypeScript, React, Node.js, SQL

Tools & Workflow: Git/GitHub, VS Code, GitHub Copilot, Wix CMS, Agile/Scrum, SDLC, SQLite

Relevant Experience

Web & UX Intern | Waterloo Experience Accelerate Program

January 2026 – April 2026

Grassroots Response To The Ukrainian Crisis

Waterloo, Canada

- Conducted a comprehensive UX audit as a core technical team member, identifying concrete **UX and accessibility issues** including a non-functional donate button, low-contrast buttons, and unclear page titles.
- **Researched translation options** for non-English-speaking users; compared three Wix translation plugins and recommended a free manual-translation workaround after finding the paid options unreliable or unsafe.
- Designed **high-quality deliverables including 10+** social media graphics, short-form video reels, and donation-campaign visuals.

Projects

Digital Bookshelf | *Digital Content Team*

- Co-founded a **digital publishing startup** during an 8-week business bootcamp, establishing a foundational **design system** and creating reusable visual assets, layout, and typography for the company's 5 core eBooks.
- Conceptualized and delivered a broad spectrum of **visual assets**, including the main stakeholder pitch deck, to validate the business hypothesis and drive user engagement.

Expense Tracker | *Vanilla JavaScript, HTML/CSS*

- Built a JavaScript expense tracker from scratch (no frameworks) to practice **core logic, UI/UX, state handling, and DOM manipulation**.
- Implemented a **profit-percentage calculator** that updates in real time as transactions are added.
- Found and fixed floating-point rounding bugs, **testing across 15+ edge cases** to keep totals accurate.
- Added **try-catch error** handling around JSON parsing so the app doesn't crash on bad or missing saved data.

TaskFlow SPA | *Vanilla JavaScript, HTML/CSS*

- Built a single-page task manager that filters 40+ items across All/Active/Completed views using **map and filter functions**, deployed live on GitHub Pages.
- Added **context-aware empty states** and reusable UI components so the interface responds differently depending on which filter view is empty, instead of showing a generic blank screen.
- Shipped the project over 25 commits, keeping each commit focused on a single change.

Activities & Certifications

Event Organizer & Digital Content | Regional Sports Tournaments: Created promotional graphics and digital content for a local volleyball tournament. Organized event logistics, flyers, and a community raffle for a regional 3v3 basketball tournament.

Toyota Innovation Challenge: IDEAs Clinic, Waterloo Engineering (in partnership with TMMC): completed a hands-on design-challenge program

Certifications: AWS Cloud Practitioner (In Progress); Data Structures & Algorithms; Python Essential Training; SQL Essential Training
